

The LeveLine CTD records highly accurate water level, temperature, conductivity and salinity measurements in a wide range of groundwater and surface water applications. Housed inside the sealed body is a ceramic level sensor, temperature sensor, 10-year lithium battery and a versatile datalogger with capacity for 500,000 data points.

The LeveLine CTD Absolute uses a piezoresistive ceramic pressure sensor to provide excellent durability and long-term stability whilst delivering an impressive accuracy of 0.05% FS. A variety of level ranges are available and all of them are temperature compensated across a scale of -20 to 80 deg. C. The conductivity sensor is adapted from our long established Aquaprobe range and records measurements of conductivity and salinity with an impressive 0-200,000 us/cm range or 0-70 PSU for Salinity.

Across the range of Leveline water level loggers we use an all Titanium body. Titanium is widely regarded as the best material to use in any water level logger but especially important when deploying into harsh or saline environments ensuring dependable long-term deployment.

## **Applications**

- Saltwater Intrusion.
- Contaminant plume profiling.
- Tracer tests.
- Leachate monitoring.
- Groundwater level monitoring, pump tests, slug tests etc.
- Stream, lake and reservoir water level measurement.
- Wetland and flood water monitoring.
- · Coastal monitoring.
- Tank level measurement.
- Long term continuous monitoring in boreholes, surface water and seawater applications.
- Spot Measurements.

#### **High Accuracy**

Highly accurate pressure and temperature sensors Various depth ratings available up to 100m

# Corrosion Resistant

Rugged titanium body for corrosion resistance

## 4 Ring stainless steel conductivity

Measures conductivity which can be output as either absolute, corrected to 20°C or corrected to 25°C.

Also calculates salinity value

#### Extended nose cone

Nose cone offers protection and is an integral part of the conductivity sensor

#### **Features**

- 0.05% FS Accuracy for Level
- 1% of reading accuracy for conductivity and salinity.
- 500,000 data point memory.
- 10 Year Battery Life.
- Titanium Body.
- 5 Year Warranty.
- Included LeveLink PC Software for basic and advanced data compensation.
- SDI-12, RS485/MODBUS direct out communications.
- 22mm x 186mm.
- Vented option available.

## Leveline-CTD Battery and Logging

The LeveLine is set up using the LeveLink PC Software, LeveLine Meter or Quick Deploy Key. A variety of logging types are available these include Linear, Event Based, Schedule, Future Start, Future Stop, Deployed Start and Real Time View.

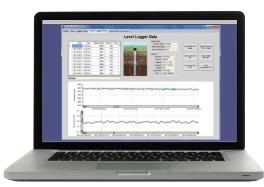

Event based logging can be used to respond to a set level or temperature change with the option of scheduling logging which is faster or slower for a defined time frame to maximise memory and battery usage.

## Data Management, Viewing and Export

Data is downloaded into the LeveLine PC application. This intuitive software allows for data to be compensated and then exported. Basic compensation can be carried out by using a BaroLine file to correct the level data for atmospheric pressure.

Advanced features include, density correction, manual barometric pressure correction, salinity and EC correction, field zero correction, averaging and automatic depth to water corrections. A bulk data correction facility is also available to compensate multiple LeveLine files at once. Data can be exported in raw or compensated formats into .csv formats for further processing outside of the LeveLink application.

LeveLink PC Application

## **Deployment Options**

The LeveLine-CTD is designed to be deployed using our rugged deploy cord, which is available in a variety of lengths and is easily cut to size and secured to the eyelet in the Delrin cap and attached to a suitable well cap assembly.

Direct read cables are available in set or customisable lengths up to 500 meters. This convenient method keeps the LeveLine in a fixed place and removes the need to extract the LeveLine-CTD to extract the data or make changes to the logging scheme.

Direct Out SDI-12 RS485/MODBUS communication is available across the range of LeveLine water level loggers when used with a direct read cable. This in-built feature removes the need for an external convertor saving time and minimising the footprint of the deployment on site.

As power is drawn from the third-party device the internal battery is switch off enhancing the versatility of the LeveLine-CTD. The LeveLine-CTD is compatible with any third-party data logger or telemetry device supporting these protocols.

## Communication Options. LeveLine PC Kit

Data is downloaded from the LeveLine via a USB PC Kit connected the LeveLink application.

See exactly where the LeveLine logger came from, in Google Earth with the completely unique GPS embedding feature

#### LeveLine Meter

is available to remove the need to take your computer into the field. Data can be gathered from multiple LeveLine's and later downloaded to your PC for compensation.

In addition, the LeveLine meter can embed the GPS co-ordinates to your data, allow your to configure the LeveLine logging rates, view live data and calibrate the conductivity sensor when using a LeveLine-CTD.

### Quick Deploy Key

The Quick Deploy Key is a simple device which allows the safe initiation of a pre-programmed logging scheme at the time of deployment. The Quick Deploy Key can also zero the depth and zero the logger to start it in the field if no scheme has been pre-programmed in LeveLink. An LED displays battery level, memory capacity and performs a self-test on the LeveLine.

## LeveLine-BARO Atmospheric Pressure Logger The LeveLine-BARO Logger records atmospheric pressure in mbar, psi, kPa, bar, mbar, mmHg, inHg, cmH2O and

inH2O. It is the preferred method to compensate the absolute data recorded by the LeveLine using the LeveLink PC application. This LeveLine-BARO data can be downloaded and exported separately for further analysis of site conditions.

The LeveLine-BARO is deployed onsite away from the highest water level. One LeveLine-BARO is suitable for multiple LeveLine's within a 10km radius.
